

# Fiscal Year 2020 Strengthening Investigative Tools and Technology for Combating Child Sexual Exploitation Performance Measures

The following pages outline performance measures for the **Fiscal Year 2020 Strengthening Investigative Tools and Technology for Combating Child Sexual Exploitation** program and list the data that grantees must report on to complete a Performance Data Report. The Office of Juvenile Justice and Delinquency Prevention (OJJDP) requires grantees to provide data for the performance measure in the column labeled “Data Grantee Reports.” Grantees enter their data in a customized tool provided to grantees awarded funds under this program.

Grantees enter data in January and July of each calendar year and are responsible for creating their Performance Data Report. Grantees submit this report to OJJDP through the Grants Management System (GMS).

If you have questions about the performance measures, please contact your program manager.

Performance Measure	Definition	Data Grantee Reports	Record Data Here
Percentage of users reporting satisfactory use of the application	Performance measure focuses on overall customer satisfaction with the application. Satisfaction with the application is defined as the application being acceptable or fulfilling expectations or needs. A user needs to use the application at least once during the activity period to be reported on for this measure. User surveys are the preferred data source. A user can be an individual, organization, or government agency.	<ul style="list-style-type: none"> <li>A. Number of users reporting satisfactory use of the application</li> <li>B. Total number of users using the application</li> <li>C. Percentage of users using the application who were satisfied with the application</li> </ul>	
Number of users reporting improvement in their investigative practices	Performance measure focuses on the efficiency and effectiveness of the application. This measure demonstrates whether, after using the application, the application enhances the efficiency and effectiveness of the development, refinement, and advancement of investigative tools, methods, and technologies that address child pornography,	<ul style="list-style-type: none"> <li>A. Number of users reporting improvement in their investigative practices</li> <li>B. Total number of users surveyed</li> <li>C. Percentage of users reporting improvements in their investigative practices</li> </ul>

	<p>exploitation, and sex trafficking. Improvement in investigative practices may include less time to investigate, improved ability to identify victims and offenders, and the accurate collection of evidence. A user needs to use the application at least once during the activity period to be reported on for this measure. User surveys are the preferred data source. A user can be an individual, organization, or government agency.</p>		
<p>Percentage of users reporting a false positive</p>	<p>Performance measure focuses on the accuracy and quality of the application. A false positive is defined as the application delivering a positive result to identify a victim or offender, as described by the application guidelines and the developer, when the application should have delivered a negative result according to data validation and verification. Count a user as reporting a false positive result if the user receives a false positive result at least once or more during the activity period. The false positive result can be caused by human error, developer error, a change in technology, or other explanations. A user needs to use the application at least once during the activity period to be reported on for this measure. User surveys or</p>	<p>A. Number of users reporting a false positive result while using the application during the activity period            B. Number of users using the application during the activity period            C. Percentage of users reporting false positive results while using the application (A/B)</p>

	<p>developer tracking software are the preferred data source. A user can be an individual, organization, or government agency.</p>		
<p>Number of users reporting an increased ability to investigate crimes</p>	<p>Performance measure focuses on the impact of the application and its usefulness in overcoming technology-related investigative challenges. Increased ability to investigate a crime may include the identification of a criminal act, offender, or victim, and evidence supporting the above identification, that was previously not possible without the application. For example, the identification of perpetrators trading child pornography in virtual private networks. Using a survey conducted during the activity period, only count users that report an increased ability to investigate crimes when using the application. The survey should be conducted a minimum of 3–6 months after the user first employs the application. Only those who used the application at least once are surveyed. A user can be an individual, organization, or government agency.</p>	<p>A. Number of users reporting an increased ability to investigate crimes using the application            B. Number of users surveyed during the activity period            C. Percentage of users reporting increased ability to investigate crimes (A/B)</p>
